Versus

Sunbrella Acrylic Yarn

Sunbrella's performance doesn't stop at the finish —it's engineered into the core of each fabric with durable fibers that are completely saturated with color.

Other Yarns

Most performance fabrics are simply regular fabrics with a protective surface finish. Over time, however, normal use, spills and cleanings gradually wear away at that finish, eventually exposing the fabric to potentially irreversible damage.

Driven by Design. Propelled by Performance.

As the leading performance fabric with the most comprehensive warranty in the industry, Sunbrella® fabrics offer best-in-class comfort, color retention, cleanability, and strength that lasts.

Comfortable & Soft

Sunbrella fabrics proves that you can enjoy the best of both worlds: durability and impeccable softness.

Easy-to-Clean & Stain Resistant

Engineered to resist stains and repel water, Sunbrella fabrics are easy to clean with soap and water.

Mold and Mildew Resistant

All Sunbrella fabrics are engineered to resist mold and mildew. Should exposure to dirt and debris cause mold and mildew to occur, all Sunbrella fabrics can be easily and safely cleaned with bleach.

Long-Lasting & Wear Resistant

Sunbrella fabrics guarantee against abrasion, pilling, loss of color, and loss of strength and will stand up to years of normal wear, exposure and cleaning.

Fade & UV Resistant

All Sunbrella fabrics feature stabilized UV and color pigments to prevent fading, damage or deterioration.

Bleach Cleanable

Because color goes to the core of Sunbrella fibers, Sunbrella fabrics can be cleaned with solvents such as bleach without losing color.

PALMERA FURNITURE

ZERO LANDFILL

Today, every Sunbrella manufacturing facility around the globe sends absolutely no waste to the landfill. For over 30 years, Sunbrella has recycled its industrial wastes such as yarn and packing.

PRODUCT LIFECYCLE MANAGEMANT

Heritage Renaissance line containing up to 50% recycled solution-dyed acrylic fibres.

Recycled fibres are sourced directly from production plants where waste is divided into color groups and turned back into fibres.

WILDLIFE CONSERVATION

We work to preserve the environment around our facilities, conserving the plant and animal life that is native to the area.

LOW WATER CONSUMPTION

In the solution-dyeing process, colour pigments are added to the yarn as it is spun, to guarantee colourfastness and save water. The small amount of water used in our weaving process is fully recycled in-house.

SUN PROTECTION

In 2011, we installed solar arrays for Sunbrella manufacturing facilities that generated enough energy to power 47 homes and, combined with an upgrade of all light fixtures, reduced annual CO2 emissions by 1,000 tons. In 2016, the solar capacity across facilities was tripled with a total capacity of more than 1,500 kilowatts.

LESS WASTE

Our quantity Sunbrella fabrics do not rot or fade and are highly resistant over time. As our fabrics do not need to be replaced as often as traditional fabrics, they generate less waste.

RECYCLED SUNBRELLA ACRYLIC

Made with leftover Sunbrella material captured in the manufacturing process, our recycled acrylic yarn displays slight variations and color flecks throughout, adding to the unique character of the product.
